# How to Replace an ebook with an Updated Document

For each new group, often times most documents will remain unchanged from the previous library. However, there will be times when a single document needs to be updated. For this example, we will use the **Lesotho Healthy Youth Framework** document
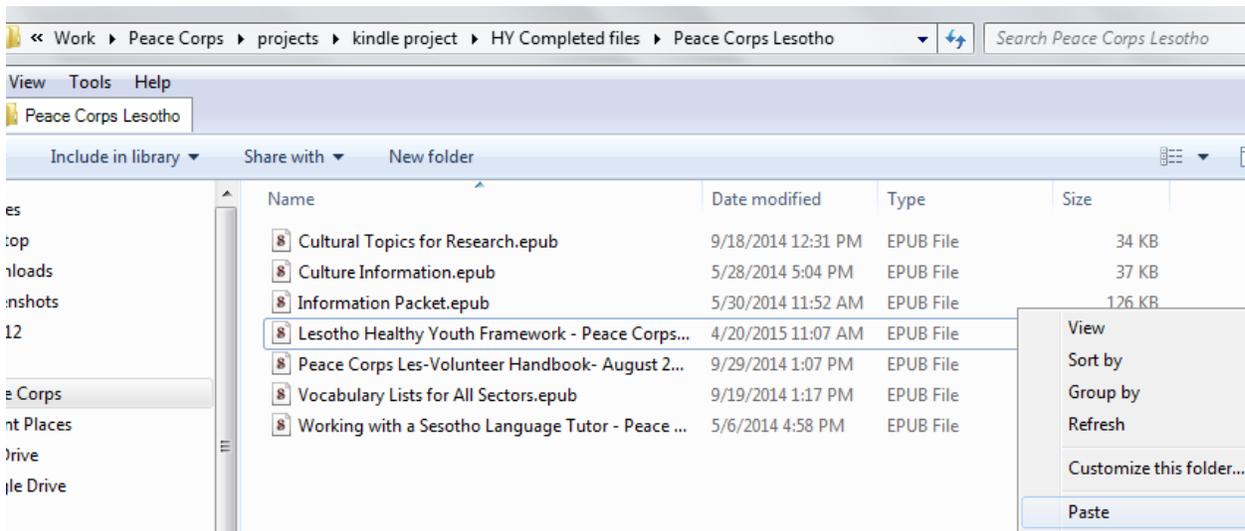

1. Begin by finding the document to be updated within the Calibre Library. Right click on it and select **Open containing folder**

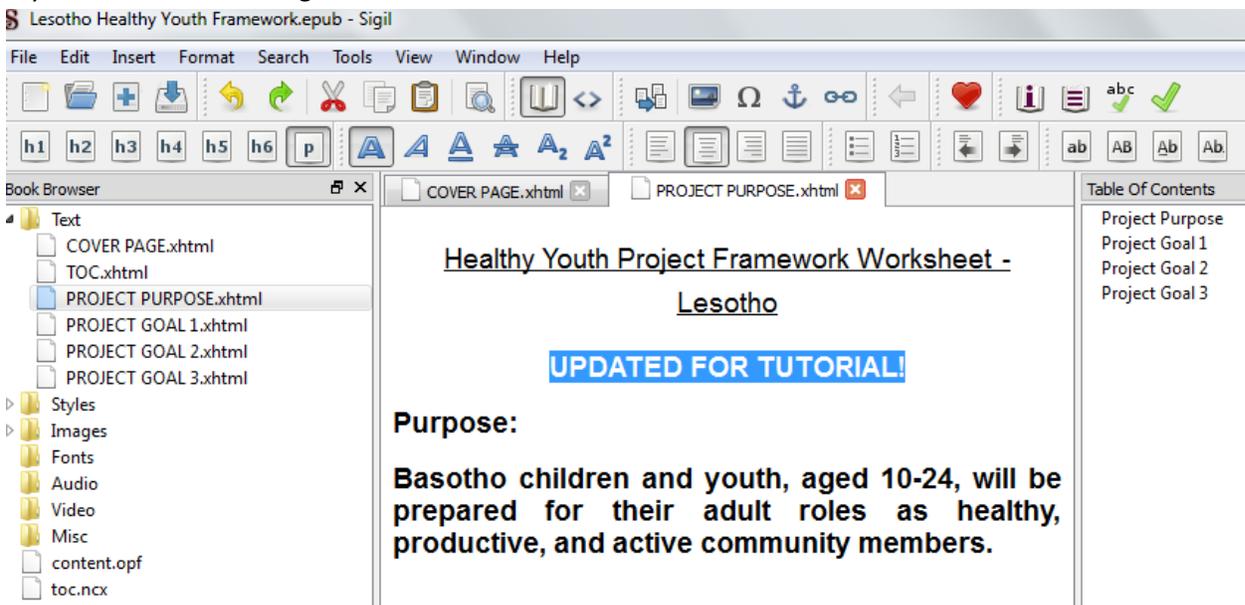

2. Sometimes a book will have 2 formats: .mobi and .epub. Be sure to select the epub file. Right click on it and select **Copy**
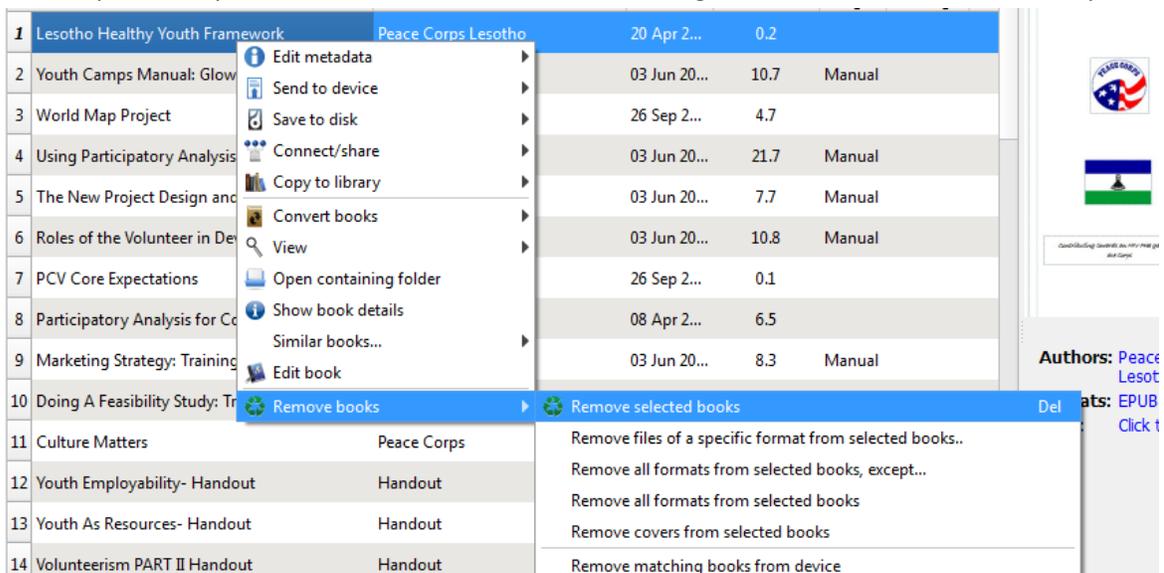

3. Paste it into the HY Completed Files folder in the Kindle Project directory

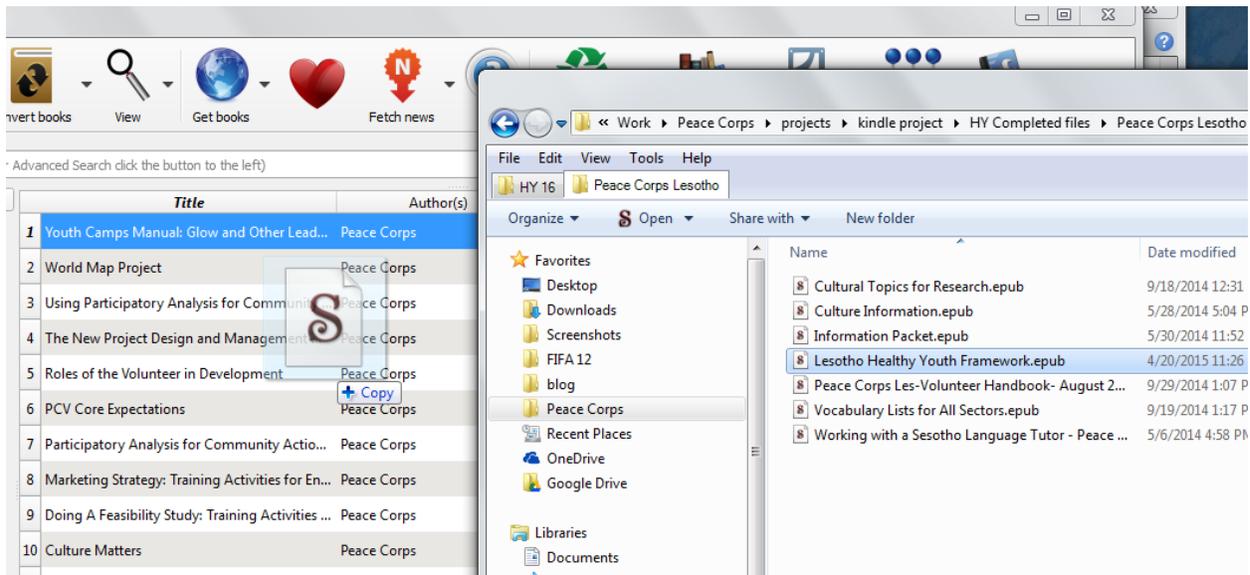

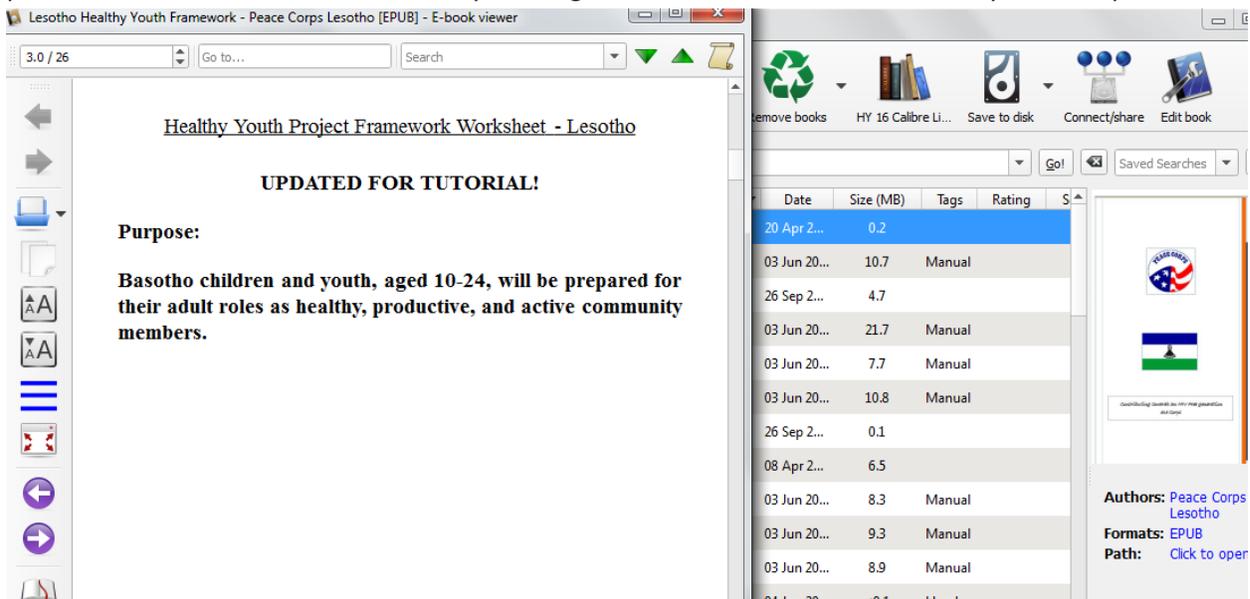

4. You may now edit the file in Sigil.

5. Now we must import the updated file in Calibre. First delete the original book from the Calibre library

6. Important step: Drag the newly updated file from the HY Completed Files folder into the Calibre Library

7. The updated ebook will be listed in the library once again. You can double click it to verify it's the updated file

That's it! We want to keep the updated files in the **HY Completed files** folder to ensure it always has the latest version.
